

Project Requirements — DataBound AI Sample

Project name: Internal Knowledge Assistant Pilot

Project deadline: 25 August 2026

Project owner: Priya Menon

Objective: Build a small internal tool so the support team can ask questions about our own product documentation and get answers with citations, instead of searching manually.

Scope and Technology

In scope for this pilot:

- Upload PDF and TXT documentation
- Ask natural-language questions about uploaded docs
- Show source citations for every answer

Technologies being used: FastAPI, React, PostgreSQL.

Out of scope for this pilot: multi-language support.

Testing Strategy

Testing responsibilities:

- Arjun Verma is responsible for testing.
- Sneha Iyer is responsible for QA sign-off before launch.

Test coverage should include upload validation, retrieval accuracy, and — critically — hallucination tests: the system must say when it doesn't have enough information, rather than guessing.
